

# iPhone

## User's Guide

- If no Wi-Fi networks are available or you choose not to join any, iPhone connects to the Internet over a cellular data network (📶 or 📶). You cannot access the iTunes Wi-Fi Music Store over a cellular network.

If no Wi-Fi networks are available and a cellular data network is not available, iPhone cannot connect to the Internet. Turning on airplane mode disables both Wi-Fi and cellular network access.

**Note:** Because iPhone uses the cellular network for the phone, you cannot use the Internet over a cellular network when you're on a call. To talk on the phone and use Internet applications at the same time, connect over a Wi-Fi network.

Many Wi-Fi networks can be used free of charge including, in some regions, Wi-Fi hotspots provided by your iPhone carrier. Some Wi-Fi networks require a fee. To join a Wi-Fi network at a hotspot where charges apply, you can usually open Safari to see a webpage that allows you to sign up for service.

## Joining a Wi-Fi Network

The Wi-Fi settings let you turn on Wi-Fi and join Wi-Fi networks.

### Turn on Wi-Fi

- Choose Settings > Wi-Fi and turn Wi-Fi on.

### Join a Wi-Fi network

- Choose Settings > Wi-Fi, wait a moment as iPhone detects networks in range, then select a network. If necessary, enter a password and tap Join (networks that require a password appear with a lock icon).

Once you've joined a Wi-Fi network manually, iPhone will automatically connect to it whenever the network is in range. If more than one previously used network is in range, iPhone joins the one last used.

When iPhone is connected to a Wi-Fi network, the Wi-Fi icon  in the status bar at the top of the screen shows connection strength. The more bars you see, the stronger the connection.

For information about configuring Wi-Fi settings, see "Wi-Fi" on page 92.

## Accessing the Internet via Cellular Network

EDGE and GPRS allow Internet connectivity over the cellular network available through your iPhone carrier's wireless service. Check the carrier's network coverage in your area for availability.

While iPhone is actively transferring data over a cellular network—downloading a webpage, for example—you may not be able to receive calls. Incoming calls then go directly to voicemail.

## Syncing iPhone with Your Computer

When you connect iPhone to your computer, iTunes syncs iPhone with the information and media on your computer, according to how you've configured the iPhone sync settings in iTunes.

You can set iTunes to sync any or all of the following:

- Contacts—names, phone numbers, addresses, email addresses, and so on
- Calendars—appointments and events
- Email account settings
- Webpage bookmarks
- Ringtones
- Music and audiobooks
- Photos
- Podcasts
- Videos

Ringtones, music, audiobooks, podcasts, and video content are synced from your iTunes library. If you don't already have content in iTunes, the iTunes Store (available in some countries) makes it easy to purchase or subscribe to content and download it to iTunes. You can also add music to your iTunes library from your CDs. To learn about iTunes and the iTunes Store, open iTunes and choose Help > iTunes Help.

Contacts, calendars, webpage bookmarks, and photos are synced from applications on your computer, as described below. Contacts and calendars are synced both ways between your computer and iPhone. New entries or changes you make on iPhone are synced to your computer, and vice versa. Webpage bookmarks are also synced both ways.

Email account settings are only synced from your computer's email application to iPhone. This allows you to customize your email accounts on iPhone without affecting email account settings on your computer.

- Your user name and password for incoming and outgoing servers (you may not need to enter a user name and password for an outgoing server)

**Note:** Exchange email accounts must be configured for IMAP in order to work with iPhone. Contact your IT organization for more information.

## Sending Email

You can send an email message to anyone who has an email address. You can send the message to one person or to a group of people.

### Compose and send a message

- 1 Tap .
- 2 Type one or more names or email addresses in the To or Cc (carbon copy) fields, or tap  and choose a contact to add the contact's email address.  
As you type an email address, comparable email addresses from your contacts list appear below. Tap one to add it.
- 3 Type a subject if you like, then type a message.
- 4 Tap Send.

### Send a photo in a message

- From the Home screen choose Photos, then choose a photo. Then tap  and tap Email Photo.

If you have more than one email account on iPhone, the photo is sent using the default account (see page 101).

### Save a message as a draft so you can work on it later

- Start composing the message and tap Cancel. Then tap Save. You can find the message in the Drafts mailbox, add to it or change it, and then send it.

### Reply to a message

- Open a message and tap . Tap Reply to reply to just the person who sent the message. Tap Reply All to reply to the sender and the other recipients. Then add a message of your own if you like, and tap Send.

When you reply to a message, files or images attached to the initial message aren't sent back.

### Forward a message

- Open a message and tap , then tap Forward. Add one or more email addresses and a message of your own if you like, then tap Send.

When you forward a message, you can include the files or images attached to the original message.

## Delete a message

- Open the message and tap .

You can also delete a message directly from the mailbox message list by swiping left or right over the message title and then tapping Delete.

Or you can tap Edit and tap  next to a message.

## Check for new messages

- Choose a mailbox, or tap  at any time.

## Open an attached file

You can view or read some types of files and images attached to messages you receive. For example, if someone sends you a PDF, Microsoft Word, or Microsoft Excel document, you can read it on iPhone.

- Tap the attachment. It downloads to iPhone and then opens.

You can view attachments in both portrait and landscape orientation. If the format of an attached file isn't supported by iPhone, you can see the name of the file but you can't open it. iPhone supports the following email attachment file formats:

- .doc, .docx, .htm, .html, .pdf, .txt, .xls, .xlsx

If you like, you can set iPhone to sync with only a portion of what's on your computer. For example, you might want to sync only a group of contacts from your address book, or only unwatched video podcasts. You can adjust sync settings whenever iPhone is connected to your computer.

**Important:** You can connect and sync with only one iPhone at a time. Disconnect one before connecting another. You should be logged in to your own user account on the computer before connecting iPhone. On a PC, if you sync more than one iPhone to the same user account, use the same sync settings for each.

## Setting Up Syncing

You use the iPhone settings panes in iTunes to specify the iTunes content and other information you want to sync to iPhone.

### Set up syncing

- 1 Connect iPhone to your computer, and open iTunes (if it doesn't open automatically). Unless your keyboard has a high-powered USB 2.0 port, you must connect iPhone to a USB 2.0 port on your computer.
- 2 Select iPhone in the iTunes window (below Devices, on the left).
- 3 Configure the sync settings in each of the settings panes.
- 4 Click Apply in the lower-right corner of the screen.

The following sections provide an overview of each of the iPhone settings panes. For more information, open iTunes and choose Help > iTunes Help.

## Notes

### Writing, Reading, and Emailing Notes

Notes are listed by date added, with the most recent note at the top. You can see the first few words of each note in the list.

#### Add a note

- Tap **+**, then type your note and tap Done.

#### Read or edit a note

- Tap the note. Tap anywhere on the note to bring up the keyboard and edit the note. Tap **➡** or **⬅** to see the next or previous note.

#### Delete a note

- Tap the note, then tap .

#### Email a note

- Tap the note, then tap .

To email a note, iPhone must be set up for email (see “Setting Up Email Accounts” on page 46).
